

# JAVA WORKSHOP FOR GRADES 7-8

Our goal is to introduce programming to children at a young age to introduce them to computer science and inspire them to consider a career in computer science. In the world, the expanse of the application of computer science is expanding. In the Java Workshop, we teach basics such as variable types, if-else statements, while and for loops, and classes. We also teach them to apply these skills to make a code that calculates or manipulates objects.

INSPIRING  
CHILDREN TO CODE

FROM AS YOUNG AS  
2<sup>ND</sup> GRADE!

SCRATCH

PYTHON

JAVA

LEARN TO MAKE  
GAMES AND  
PERFORM  
CALCULATIONS!

**CODING THE FUTURE**
